Which NYC schools have the best math results?

- The best math results are at least 80% of the ***maximum possible score of 800*** for math.
- Save your results in a pandas DataFrame called `best_math_schools`, including `"school_name"` and `"average_math"` columns, sorted by `"average_math"` in descending order.

What are the top 10 performing schools based on the combined SAT scores?

- Save your results as a pandas DataFrame called `top_10_schools` containing the `"school_name"` and a new column named `"total_SAT"`, with results ordered by `"total_SAT"` in descending order.

Which single borough has the largest standard deviation in the combined SAT score?

- Save your results as a pandas DataFrame called `largest_std_dev`.
- The DataFrame should contain one row, with:
  - `"borough"` - the name of the NYC borough with the largest standard deviation of `"total_SAT"`.
  - `"num_schools"` - the number of schools in the borough.
  - `"average_SAT"` - the mean of `"total_SAT"`.
  - `"std_SAT"` - the standard deviation of `"total_SAT"`.
- Round all numeric values to two decimal places.
